TITLE : OPERATING METHOD OF  
ON-VEHICLE DAD PLAYER

ABSTRACT : PURPOSE: To select the 1st pause for a temporary stop or the 2nd pause for a long-time stop only with a pause button, and restart reproducing an ejected disk at a reproduction interruption position, by providing a storage circuit and a pause function.

CONSTITUTION: The same track on the disk is traced repeatedly with the pause button 22c and the 1st pause operation is performed for a short-time. When the play button 22a is turned on in this pause operation, the 1st pause is reset and the reproduction is restarted at the trace position. When the pause button is further turned on during the 1st pause, the rotation of the disk is stopped and a pickup is returned to an initial position to store disk information in RAM23. Then, the end of writing and storage to RAM32 is displayed on an indicator 24. When a play button 22a is turned on during the 2nd pause for a long- time stop, the 2nd pause is reset and a reproduction interruption address is read out of RAM32 and the reproduction is restarted at this position.
